Linking Social and Personal Preferences: Theory and Experiment

Overview

Identification	LinkingSocialAndPersonalPreferences
-----------------------	-------------------------------------

Abstract

Paper abstract: The attitudes of a Decision Maker toward riskless and risky choices-both personal choices and social choices-enter virtually every realm of individual decision-making. This paper asks when it is possible to link these attitudes. We provide a simple formalization of this question and necessary and sufficient conditions that such a link exists. We also offer an experimental test of the theory in which subjects were confronted with choices (involving monetary outcomes) in three domains: risky personal choices, riskless social choices and risky social choices. Revealed preference tests show that subject choices are generally consistent with utility maximization within each choice domain but frequently involve at least some errors. We test for consistency across choice domains using a novel nonparametric revealed preference test that accounts for these errors.

The data contains information from lab experiments at University of Bergen (April 11, 2013) and NHH Norwegian School of Economics (November 7, 2013).

Unit of Analysis	Individuals
-------------------------	-------------

Scope & Coverage

Keywords	Social preferences, Risk preferences, Revealed preference, Experiment
-----------------	---

Countries	Norway
------------------	--------

Geographic Coverage

Bergen, Norway

Universe

Undergraduate students at University of Bergen and NHH Norwegian School of Economics.

Sampling

Sampling Procedure

By invitation to undergraduate students.

Weighting

No weights applied.

Data Collection	
Data Collection Mode	Lab experiment with purpose-made computer interface, also a questionnaire administered with pen and paper.

Files Description

Dataset contains 2 file(s)

mmzame-decisions	
# Cases	61998
# Variable(s)	11
File Structure	Type: relational Key(s): id (Participant) , phase (Phase) , bset (Within individual numbering of budget set)
Notes The session with $200 < id < 300$ had a technical glitch, and needed restarting. As a consequence, session 2 does not have the same budget sets across all treatments. Because of the glitch, the participants with $id=214,225$ have only 199 choices registered.	

mmzame-background	
# Cases	310
# Variable(s)	16
File Structure	Type: relational Key(s): id
Notes Data coded from paper questionnaires	

Variables List

Dataset contains 27 variable(s)

Variables Description

Dataset contains 27 variable(s)

File : mmzame-decisions

id: Participant

Information [Type= discrete] [Format=numeric] [Range= 102-760] [Missing=*]

Statistics [NW/ W] [Valid=61998 /-] [Invalid=0 /-]

Definition Non-informative identifier of participant. First digit indicates the session number.

place

Information [Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]

Statistics [NW/ W] [Valid=61998 /-] [Invalid=0 /-]

Definition Location of session, at either University of Bergen (UoB) or NHH Norwegian School of Economics (NHH).

Value	Label	Cases	Percentage
1	UoB	26998	43.5%
2	NHH	35000	56.5%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

phase: Phase

Information [Type= discrete] [Format=numeric] [Range= 1-4] [Missing=*]

Statistics [NW/ W] [Valid=61998 /-] [Invalid=0 /-]

Definition Indicates sequence of treatment within session.

Value	Label	Cases	Percentage
1		15498	25.0%
2		15500	25.0%
3		15500	25.0%
4		15500	25.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

treatment: Treatment

Information [Type= discrete] [Format=character] [Missing=*]

Statistics [NW/ W] [Valid=61998 /-] [Invalid=0 /-]

Definition Indicates the meaning of X- and Y-axis in a given phase of the session. The names in the dataset maps to the names used in the paper as follows: "dictator": Social Choice; "moral": Social Risk; "observer": Not used in first paper; "risk": Personal Risk.

Value	Label	Cases	Percentage
dictator		15500	25.0%
moral		15498	25.0%
observer		15500	25.0%
risk		15500	25.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

round: Round

Information [Type= discrete] [Format=numeric] [Range= 1-50] [Missing=*]

Statistics [NW/ W] [Valid=61998 /-] [Invalid=0 /-]

Definition Sequence number of decision within a phase/treatment for individuals.

bset: Within individual numbering of budget set

Information [Type= continuous] [Format=numeric] [Range= 1-100] [Missing=*]

Statistics [NW/ W] [Valid=61998 /-] [Invalid=0 /-]

Definition A non-informative within-individual number of the budget sets (a (maxx, maxx) combination).

File : mmzame-decisions**# time: Time spent on decision (in seconds).**

Information	[Type= continuous] [Format=numeric] [Range= 0-721] [Missing=*]
--------------------	--

Statistics [NW/ W]	[Valid=61998 /-] [Invalid=0 /-] [Mean=4.512 /-] [StdDev=6.716 /-]
---------------------------	---

maxx: Extreme of budget set, X axis

Information	[Type= continuous] [Format=numeric] [Range= 0.1-100] [Missing=*]
--------------------	--

Statistics [NW/ W]	[Valid=61998 /-] [Invalid=0 /-] [Mean=56.505 /-] [StdDev=27.994 /-]

6		58	18.7%
7		60	19.4%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

place

Information [Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]

Statistics [NW/ W] [Valid=310 /-] [Invalid=0 /-]

Definition Location of session, at either University of Bergen (UoB) or NHH Norwegian School of Economics (NHH).

Value	Label	Cases	Percentage
1	UoB	135	43.5%
2	NHH	175	56.5%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

sex: Sex

Information [Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]

Statistics [NW/ W] [Valid=310 /-] [Invalid=0 /-]

Definition Note that individuals age 30 and above has had their age replaced by the group average in order to minimize risk of indirect identification.

Literal question What is your gender?

Value	Label	Cases	Percentage
1	male	183	59.0%
2	female	127	41.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

age: Age in years

Information [Type= discrete] [Format=numeric] [Range= 18-36] [Missing=*]

Statistics [NW/ W] [Valid=310 /-] [Invalid=0 /-] [Mean=22.716 /-]

Literal question What is your age in years?

Notes To ensure against indirect identification, individuals who reported age>=30 have had their age replaced by the average in this group.

Value	Label	Cases	Percentage
18		3	1.0%
19		21	6.8%

File : mmzame-background

age: Age in years

Value	Label	Cases	Percentage
20		46	14.8%
21		52	16.8%
22		45	14.5%
23		52	16.8%
24		28	9.0%
25		28	9.0%
26		12	3.9%
27		5	1.6%
28		6	1.9%
29		4	1.3%
36		8	2.6%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

expenditures: Own total expenditures in 2012 (Thousands NOK)

Information	[Type= continuous] [Format=numeric] [Range= 0-3000] [Missing=*]
Statistics [NW/ W]	[Valid=297 /-] [Invalid=13 /-] [Mean=135.323 /-] [StdDev=182.044 /-]
Literal question	What is your best estimate of your total expenditures the previous calendar year (2012)?

parentalincome: Estimate of gross parental yearly income

Information	[Type= discrete] [Format=numeric] [Range= 125-2000] [Missing=*]
Statistics [NW/ W]	[Valid=310 /-] [Invalid=0 /-] [Mean=1038.306 /-]
Literal question	What is the total (gross) income of your parents? Please make your best guess and tick off the corresponding circle.

Value	Label	Cases	Percentage
125	0-250' NOK	17	5.5%
375	250'-500' NOK	30	9.7%
625	500'-750' NOK	47	15.2%
875	750'-1" NOK	84	27.1%
1125	1"-1.25" NOK	51	16.5%
1375	1.25"-1.5" NOK	22	7.1%
2000	+ 1.5" NOK	59	19.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

soc_equalize: A society should aim at equalizing income

Information	[Type= discrete] [Format=numeric] [Range= 1-5] [Missing=*]
Statistics [NW/ W]	[Valid=310 /-] [Invalid=0 /-] [Mean=2.816 /-]
Pre-question	Please indicate how much you agree or disagree with the following statements by circling the corresponding number.
Literal question	A society should aim at equalizing incomes.

Value	Label	Cases	Percentage
1	disagree completely	34	11.0%
2	disagree	114	36.8%
3	neither agree nor disagree	48	15.5%
4	agree	103	33.2%
5	agree completely	11	3.5%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

File : mmzame-background

nor_equalize: In the present situation in Norway, we should do more to equalize incomes

Information	[Type= discrete] [Format=numeric] [Range= 1-5] [Missing=*]
Statistics [NW/ W]	[Valid=310 /-] [Invalid=0 /-] [Mean=2.552 /-]
Pre-question	Please indicate how much you agree or disagree with the following statements by circling the corresponding number.
Literal question	In the present situation in Norway, we should do more to equalize incomes.

Value	Label	Cases	Percentage
1	disagree completely	41	13.2%
2	disagree	127	41.0%
3	neither agree nor disagree	81	26.1%
4	agree	52	16.8%
5	agree completely	9	2.9%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

two_equalize: Two people, one earning twice as much. High earner should pay more than double t

Information	[Type= discrete] [Format=numeric] [Range= 1-5] [Missing=*]
Statistics [NW/ W]	[Valid=306 /-] [Invalid=4 /-] [Mean=2.82 /-]
Pre-question	Please indicate how much you agree or disagree with the following statements by circling the corresponding number.
Literal question	Imagine two people, one earning twice as much as the other: The person earning twice as much should pay more than double of the other in tax.

Value	Label	Cases	Percentage
1	disagree completely	34	11.1%
2	disagree	113	36.9%
3	neither agree nor disagree	60	19.6%
4	agree	72	23.5%
5	agree completely	27	8.8%
Sysmiss		4	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

poor_equalize: The government should spend more on services and benefits to the poor

Information	[Type= discrete] [Format=numeric] [Range= 1-5] [Missing=*]
Statistics [NW/ W]	[Valid=308 /-] [Invalid=2 /-] [Mean=3.646 /-]
Pre-question	Please indicate how much you agree or disagree with the following statements by circling the corresponding number.
Literal question	The government should spend more of the tax revenues on social services and benefits targeting the poor than the rich.

Value	Label	Cases	Percentage
1	disagree completely	9	2.9%
2	disagree	38	12.3%
3	neither agree nor disagree	60	19.5%
4	agree	147	47.7%
5	agree completely	54	17.5%
Sysmiss		2	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

ptax200: Ideal tax of person earning 200' NOK a year

Information	[Type= continuous] [Format=numeric] [Range= 0-85000] [Missing=*]
Statistics [NW/ W]	[Valid=301 /-] [Invalid=9 /-] [Mean=20859.189 /-] [StdDev=23071.859 /-]

File : mmzame-background

ptax200: Ideal tax of person earning 200' NOK a year

Literal question What total amount of tax per year, if any at all, should in your opinion be paid by a person earning NOK 200,000 a year? By taxes, we mean all personal income taxes. Indicate your answers in NOK.

ptax400: Ideal tax of person earning 400' NOK a year

Information [Type= continuous] [Format=numeric] [Range= 3.2-180000] [Missing=*]

Statistics [NW/ W] [Valid=301 /-] [Invalid=9 /-] [Mean=52776.734 /-] [StdDev=53504.197 /-]

Literal question And what total amount of tax should be paid by a person earning NOK 400,000?

ptax800: Ideal tax of person earning 800' NOK a year

Information [Type= continuous] [Format=numeric] [Range= 6.4-800000] [Missing=*]

Statistics [NW/ W] [Valid=300 /-] [Invalid=10 /-] [Mean=128270.95 /-] [StdDev=133961.228 /-]

Literal question And what total amount of tax should be paid by a person earning NOK 800,000?

ptax1600: Ideal tax of person earning 1600' NOK a year

Information [Type= continuous] [Format=numeric] [Range= 12-1000000] [Missing=*]

Statistics [NW/ W] [Valid=300 /-] [Invalid=10 /-] [Mean=283239.456 /-] [StdDev=285480.274 /-]

Literal question And what total amount of tax should be paid by a person earning NOK 1,600,000?

politicalview: Where would you place yourself on political views

Information [Type= discrete] [Format=numeric] [Range= 1-7] [Missing=*]

Statistics [NW/ W] [Valid=305 /-] [Invalid=5 /-]

Literal question Below is a seven-point scale on which the political views that people might hold are arranged from very left-wing to very right-wing. Where would you place yourself on this scale?

Value	Label	Cases	Percentage
1	very left-wing	2	0.7%
2	left-wing	23	7.5%
3	slightly left-wing	51	16.7%
4	moderate	74	24.3%
5	slightly right wing	95	31.1%
6	right-wing	58	19.0%
7	very right-wing	2	0.7%
